

To Whom it May Concern,

We were looking for a system to help manage low level wells equipped with SRP's. It was evaluated few proposals from different suppliers, but we have chosen Naftamatika product under the brand name Well Sim for it's attractive price.

Our company owns Well Sim system since 22nd of November, 2012 when it was installed by Naftamatika s.r.o. qualified engineers and up to date we do not have any issues in terms of reliability and performance. We noted 15% electrical power reduction at the same production levels and eliminated boiler trippings related to oil gas pulsation effect upstream the burner.

I am very glad that personnel of Naftamatika s.r.o. performed qualified trainings in field and further keep in touch closely to solve ongoing operational issues.

We are planning to buy two more Well Sim systems for our other wells and in future would like to try Well Sim equipped with Danfoss VFD to reduce further electrical power consumption.

Pagarbiai / Best Regards,

Marius Anužis
